

Handpiece (Cradle Equipment)

Product Configuration

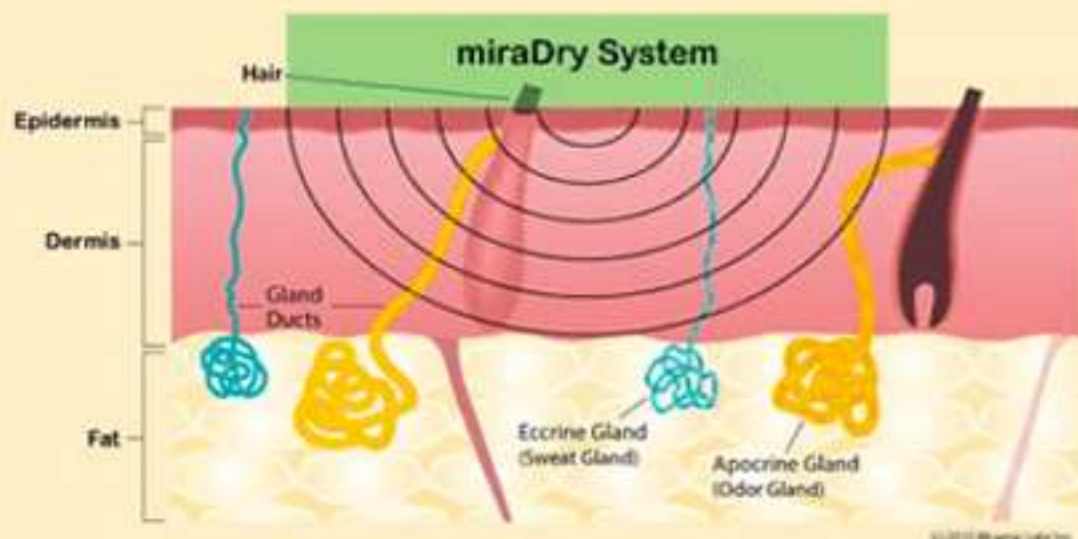

System / Consumable (Bio tip)

Applicable Disease

Hyperhidrosis (License completed)

Product Principles (Product overview, Mechanism)

MiraDry destroys sweat glands with microwave energy heat.

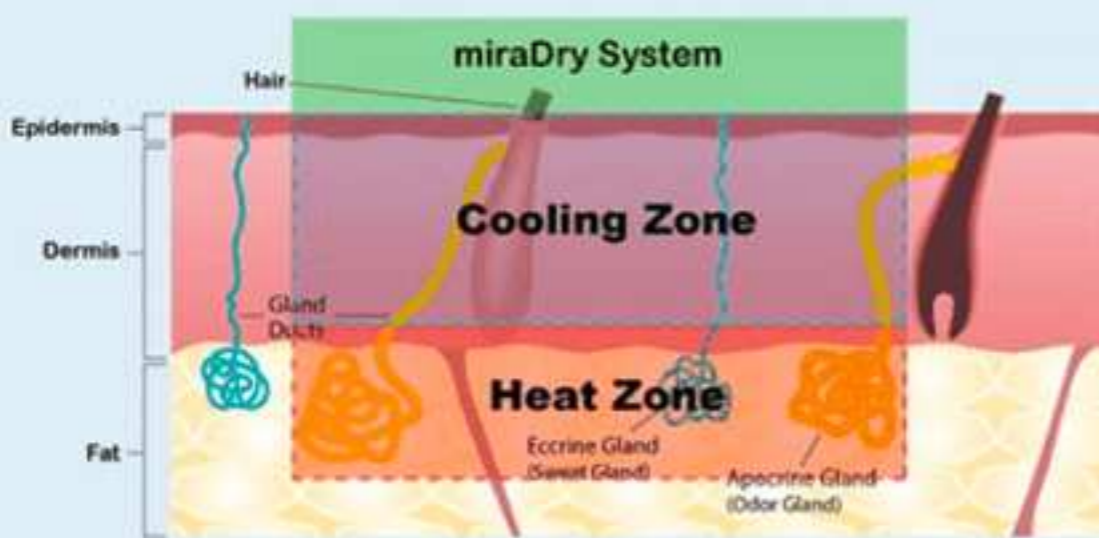

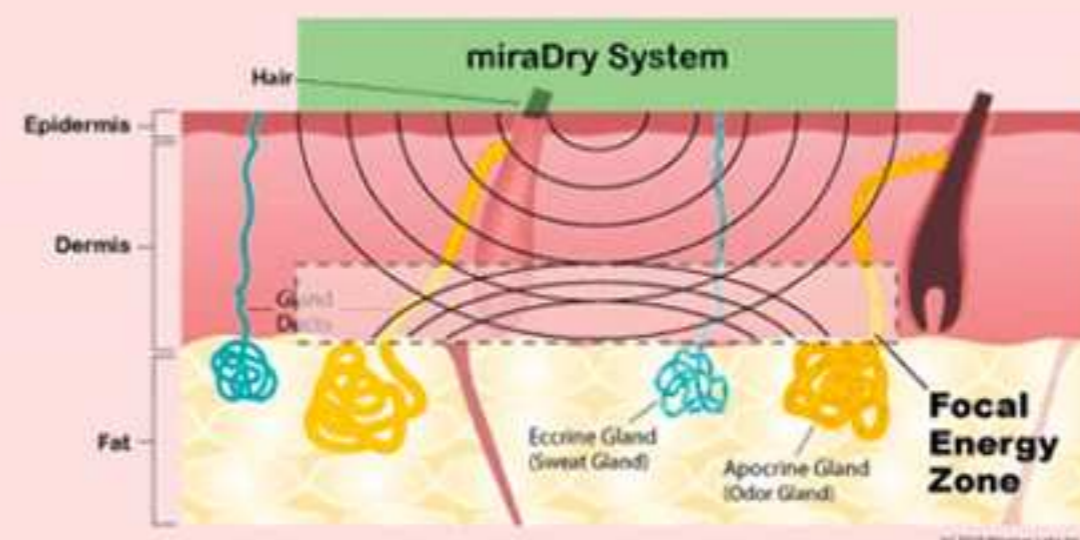

Precisely targeted energy

5.8GHz microwave energy is optimized to precisely target delivery to the dermal-fat interface region

Focal Energy Zone is created along interface, independent of skin thickness

Energy reflects and is intensified from constructive interference at the dermal-fat interface
Deep sensitive structures remain unaffected

Achieves critical temperature to destroy sweat and odor glands

Hydroceramic cooling protects epidermis and upper dermis
